

The MindMirror Platform is:

- **Non-invasive**
- **Highly Accurate.** Diagnostics **96% accuracy** which is equivalent to a mobile pupillometer
- **Rapid,** impact notifications are instantaneous and diagnostic tests can be performed in **under 40 seconds** making it ideal for assessing the status of an athlete during a game to determine if it is safe for them to resume play or if they should be removed and placed in concussion protocol
- **Cost effective.** Team doctors, coaches and athletic trainers can **run as many diagnostic tests as they would like without incurring any additional costs.**
- Pricing discounts based on the number of athletes as well as additional discounts for multi-year contracts
- **Does not require a baseline test** making it ideal for situations when evaluating an athlete for the first time
- Based on **objective, evidence based diagnostic information**
- Can be used to monitor the health of an athlete over multiple years
